"Here are some good reasons why S-K® ratchets are the best in the business."

Outstanding Features

- 1 Diamond knurled grip provides sure handling.
- 2 The forged frame of all S-K Ratchets is perfectly proportioned to a given drive size for the combination of balance and weight that provides the proper feel and the right torque for the range of sockets used. Available in $\frac{1}{4}$ — $\frac{3}{8}$ — $\frac{1}{2}$ and $\frac{3}{4}$ inch drive sizes.
- 3 Forged from specially selected alloy steel, heat treated oil quenched and tempered—they're built tough to take it time after time.
- 4 Highly polished for that special extra quality finish—then nickle chrome plated for rust and corrosion resistance.
- 5 Reversing lever quickly changes directions with a simple quarter twist.
- 6 Drive tang is precision machined and has a ball and spring detent for positive retention, yet easy removal of socket or accessory.
- 7 Completely enclosed ratchet mechanism is simple and easy to remove and replace for periodic cleaning.
- 8 Pawl and teeth in the ratchet head are case hardened for a long life and minimal wear even in hard use situations.
- 9 Close acting, triple tooth contact between pawl and fine tooth gear drive provides smooth, tight arc, ratcheting action with little or no back movement. This small arc is a big advantage in tight work areas.

The S-K® Ratchet

4 Versatile Variations on our Ratchet

Roto Ratchet

Handle pivots from the center of the head in a 270° arc and offers great versatility for getting at hard to work angles. Faster and much more convenient to use than the usual ratchet and universal joint combination. Has all of the other fine ratchet features described above. Available in $\frac{1}{2}$ inch drive size.

Tune-Up Flex Head Ratchet

Bent handle pivots in a 90° arc to provide a great range of positions for getting at those hard to reach fasteners. With the handle at a right angle to the head, the ratchet becomes a speeder handle. Available in $\frac{1}{2}$ inch drive size.

Thumb Wheel Ratchet

The S-K mechanism, built into a knurled thumb wheel, lets you get at those hard to reach places like up behind the dash or deep into a washer or dryer, just about anywhere you can get your hand into. Available in $\frac{1}{4}$ inch drive size.

Speed Wheel Kit

Knurled speed wheel allows fast finger and thumb spinning to run fasteners on and off quickly. Place ratchet in neutral position for even faster spinning. Available in $\frac{3}{8}$ and $\frac{1}{2}$ inch drive as a ratchet mechanism replacement kit. Upgrade present S-K ratchets with speed wheel kit. See service page, inside back cover, for details.

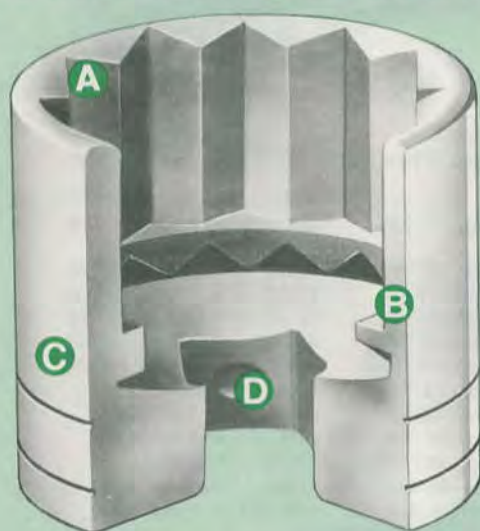

EXTRUDED SOCKETS

The main advantage of the cold extrusion manufacturing of sockets over the conventional bar stock machining process is that the resultant finished sockets are much stronger and more durable. In cold extrusion, controlled unbroken grain flow lines follow the contours of the extruded part improving the strength and toughness. Unlike the hot extrusion method, the steel is formed without heating the metal and so eliminates decarburization which tends to lower surface strength. This process also allows thinner sockets which mechanics like as it allows them to work in close situations.

The makers of S-K tools are now producing the majority of their sockets by this cold extrusion process.

All S-K sockets, regardless of manufacturing process, offer the same outstanding user features and are built to last.

S-K SOCKETS Outstanding Features

A Chamfered Ends for a smooth, easy lead in. Socket slips quickly and easily over nuts and bolts.

B Thin Wall for maximum clearance and light weight.

C Highly polished for that special finish. Nickel Chrome Plated for resistance to rust and corrosion.

D All 3/8, 1/2 and 3/4 inch drive Ball Detents on all 4 sides for positive locking to drive tools.

CAUTION: All hand sockets and accessories shown in catalog are intended for hand use only and should never be used with impact or power tools. Such use of hand sockets and accessories not only may damage the tools, but may also result in bodily injury. Use only impact sockets and accessories with impact or power tools.

When putting leverage on sockets, do not use handles longer than those listed in this catalog and do not use pipes or other extensions.

FULL LIFETIME WARRANTY

SATISFACTION GUARANTEED. If you, the consumer, are not completely satisfied with any tool in any S-K® set, simply notify the place of purchase for a free exchange during the life of the tool.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

ALLOY COMBINATION WRENCH SETS

S-K® TOOLS

S-K combination and open ends (both available with inch and metric dimensions) and box wrenches are drop forged from specially selected alloy formulated steel for overall strength. They are heat treated, oil quenched and tempered to uniformly harden them to help eliminate soft spots. They are precision broached, polished and chrome plated for that very special S-K finish.

CAUTION: Never try to increase leverage of a given wrench by using an extension device. Never use a striking device against a wrench. Either can damage the tool or the work and could cause bodily injury.

PULLER TOOLS

We offer a wide assortment of puller tools including adjustable and reversible 2-jaw pullers and reversible 3-jaw pullers. All built to take hard, constant use.

92204

ADJUSTABLE TWO JAW PULLER

Small, rugged gear puller for removing magneto, generator bearings, gears, other light duty pulling jobs. Two position jaws spread 4"; reach 3½".

92206

REVERSIBLE TWO JAW PULLER

Very versatile. Maximum safety, utility. Reversible jaws have wide face on one end, narrow face on other. Jaw spread 6"; reach 3½".

92207

ADJUSTABLE TWO JAW PULLER

7" adjustable, 2 jaw puller, used for pulling gears and bearings up to 7" in diameter. Jaws can be reversed to pull bearings out of housings.

92208

REVERSIBLE TWO JAW PULLER

Heavy duty. One end of jaws has slots for cap screw pulling of tapped gears, pulleys. Jaws spread 8"; reach 5½".

92210

ADJUSTABLE TWO JAW PULLER

Extra rugged; larger capacity. Three position jaws for flywheel gear, pulley removal. Jaws spread 10"; reach 9".

92304

ADJUSTABLE THREE JAW PULLER

7" adjustable, 3 jaw puller, used for removing small gears and bearing. Generator bearings, alternator bearings and gears up to 4" in diameter can be removed with this puller.

S-K® TOOLS

92306

REVERSIBLE THREE JAW PULLER

Same size, capacity as No. 92206 yet provides 3-point grip and extra power needed to pull gears, pulleys, other parts. Jaws spread 6"; reach 3½".

92307

ADJUSTABLE THREE JAW PULLER

7" adjustable, 3 jaw puller, same as 92207 except it is a 3 jaw puller.

92308

REVERSIBLE THREE JAW PULLER

Similar size, capacity as No. 92208. Jaws provide 3-point grip, extra power often needed to pull gears, pulleys, other parts. Jaws spread 8"; reach 5½".

92310

ADJUSTABLE THREE JAW PULLER

Similar to No. 92210. Extra rugged; provides 3-point grip and additional pulling power. Jaws spread 10"; reach 9".

92501

TIE ROD SEPARATOR

Heavy duty alloy steel tool separates tie rod end from steering arm. Also separates shock absorber links. 16" length; 2½/32" opening.

92502

STUD REMOVER

Used for removing studs from cylinder heads, intake manifolds, bell housings and engine blocks. Will remove studs from ¼" to ¾" in diameter.

92503

BALL JOINT SEPARATOR

Easily separates ball joint from steering knuckle with few hammer blows. Alloy steel withstands hard usage. 11½" length; 15/16" opening.

92504

BEARING SPLITTER

Used for removing pressed-on bearing in long shafts. Rear axle bearing and transmission bearings are removed with this puller. Bearings with an outside diameter of up to 2 1/4" can be handled with this puller.

92505

BEARING SPLITTER

Same as 92504 except it will handle bearing with an outside diameter of up to 4 1/4".

92506

PITMAN ARM PULLER FOR COMPACT CARS

Smaller than our 92507 and is used on most compact American and foreign cars.

92507

PITMAN ARM PULLER

Universal puller adapts to majority of cars and light trucks. Eliminates necessity of several types of pullers. 1 1/4" opening.

92508

STEERING WHEEL PULLER

For all major makes of automobiles. 5/8" x 4" center screw has recessed floating swivel. 3 sets of side screws: 3/8-16, 5/16-18, 5/16-24.

92513

HARMONIC BALANCER PULLER

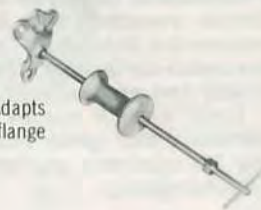

Removes balancers, pulleys, any gear with tapped holes. Floating swivel on center screws. Adaptable to 2 or 3 hole applications with side screws: 3/8-24, 5/16-18, 3/8-16.

92520

FLANGE TYPE AXLE PULLER

Bolt circle range from 4 1/2" to 5 1/2". Adapts to all major cars, light trucks with flange type axles. Fits 4, 5, 6 stud axles.

92521

SLIDE HAMMER BEARING PULLER

Used for pulling small bearings out of housings. Will remove bearing of 1/2" to 1 1/2" inside diameter. Also can be used to remove bushings on water pumps and pilot bushings.

92522

PILOT BEARING PULLER

Used for removing crank shaft pilot bearings in the vehicle. Will remove bushings to 1/2" to 1 1/2" inside diameter.

92523

BODY DENT PULLER

Used for pulling out dents in body panels. Drill a hole in the deepest part of the dent, screw in the puller and a few light raps with the slide hammer will pull out the dent.

92529

BATTERY TERMINAL PULLER

Lifts tightest terminals without damaging battery cases or posts. Center screw swivel; ideal for pulling generator bearings and magneto gears.

92540

PULLEY PULLER

Removes pressed-on 1 or 2 groove pulleys from alternators, power steering pumps. No loose parts. Jaws afford firm grip on flange. Side thumb screws tighten jaws.

RATCHET MAINTENANCE AND REPAIR

We strongly advise periodic cleaning and inspection of the ratchet mechanism. It should be removed and cleaned of grease and grit in a proper solvent. No lubrication is required.

RATCHET RENEWAL KIT

If on inspection the mechanism is found to be worn, replace it with an S-K ratchet renewal kit. (See chart below.) Removal and replacement procedure of the mechanism is the same for cleaning or replacement as shown.

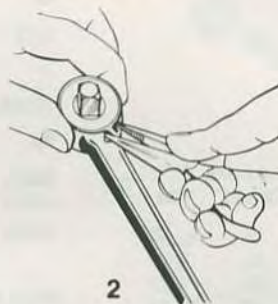

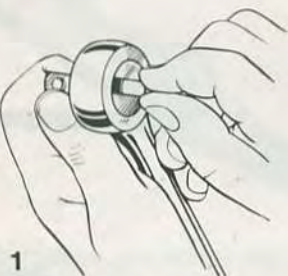

No.	Size	No.	Size
40970-2	1/4"	42470-2	1/2"

SPEED WHEEL KIT

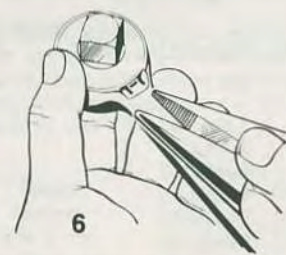

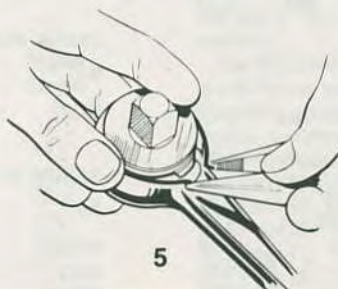

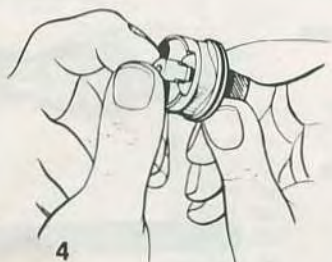

Upgrade present S-K ratchets with this speed wheel mechanism. Available in 3/8 and 1/2 inch drive. Installation steps are same as regular renewal mechanism.

No.	Size	No.	Size
45171-2	3/8"	42471-2	1/2"

TO REMOVE — Wear safety goggles. Set ratchet in neutral (Fig. 1). Compress snap ring with thin or bent nose pliers (Fig. 2) With snap ring still compressed, firmly place ratchet down on a solid surface to release ratchet mechanism (Fig. 3).

TO REPLACE — Set ratchet in neutral (Fig. 4). Insert unit in handle, holding cap in place (Fig. 5). Put snap ring in position and compress with pliers and seat unit in handle. Release snap ring (Fig. 6).
